PROCESSING GUIDE

■ Extruder Type	Standard extruders for elastomeric or thermoplastic processing
■ Screw configuration	Low compression screw with L/D of 20 to 25 and compression ratio of 1:1.2
■ Tooling	For insulation pressure tools, for jacketing tube tools are recommended. Note: Pressure Tooling may have an effect on low temperature flexibility.
■ Temperature profile extruder	The profile shown below may vary slightly depending on extruder type, head design & output.

■ Maximum mass temperature	165 – 175°C
■ Drying	Not necessary if the compound has been stored in original packing under cool (max. 30°C) and dry conditions. Mecoline compounds used from open packing require pre-drying during 4–6 hours at 60–70°C.
